DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1-3, 8-10 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 8-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Kawaguchi et al. (U.S. Patent No. 5,932,897).

Referring to figures 3-7, Kawaguchi et al. teaches a semiconductor device comprising:

A semiconductive layer (11) of a first conductive type (p), (see figure 3);

Forming a first gate oxide (17) and a second gate oxide (17+18) formed on the semiconductive layer;

A gate electrode (19), formed to range from the first gate oxide (17) film to the second gate oxide film (18);

Art Unit: 2813

A source region (13) of a second conductive type (n+) formed adjacent to the gate electrode (19);

Drain region (16) of the second conductive type (n+) formed in a position apart from the gate electrode;

A drift region (14) of a second conductive type (n-) formed so that the drift region surround the drain region; and

An impurities layer (15) of a second conductive type (n-) formed adjacent to the drain region (16), wherein the impurities layer (15) is more highly doped than the drift region (14) (see col. 5, lines 58-66), which extends deeper into the semiconductor layer (11) than the impurities layer (15, see figure 3)

Regarding to claims 2, 9, the impurities layer (15) is formed to range at least one end of the drain region (16) to one end of the gate electrode (see figures 3, 6).

Regarding to claims 3, 10, the impurities layer (15) is formed in a surface of the drift region (14) so that it is located between one end of the drain region and one end of the gate electrode (see figure 3, 6).

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO**

Art Unit: 2813

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
